The National Network of Libraries of Medicine (NNLM) supports collaboration, training and funding for libraries and community organizations serving researchers, health professionals and the public. It's goals are:

- To advance data science, open science and biomedical informatics
- To advance biomedical discovery & translational sciences
- To support the public's health: clinical systems, services & personal health
- To build collections to support discovery & health in the 21st Century

Findable Accessible Interoperable Reusable

NNLM in the Age of Big Data...

- Advocate for data literacy
- Facilitate discovery of and access to NIH data
- Promote awareness and understanding of data management best practices, policies, and tools
- Champion open data repositories
- Support professional development in the field of data management

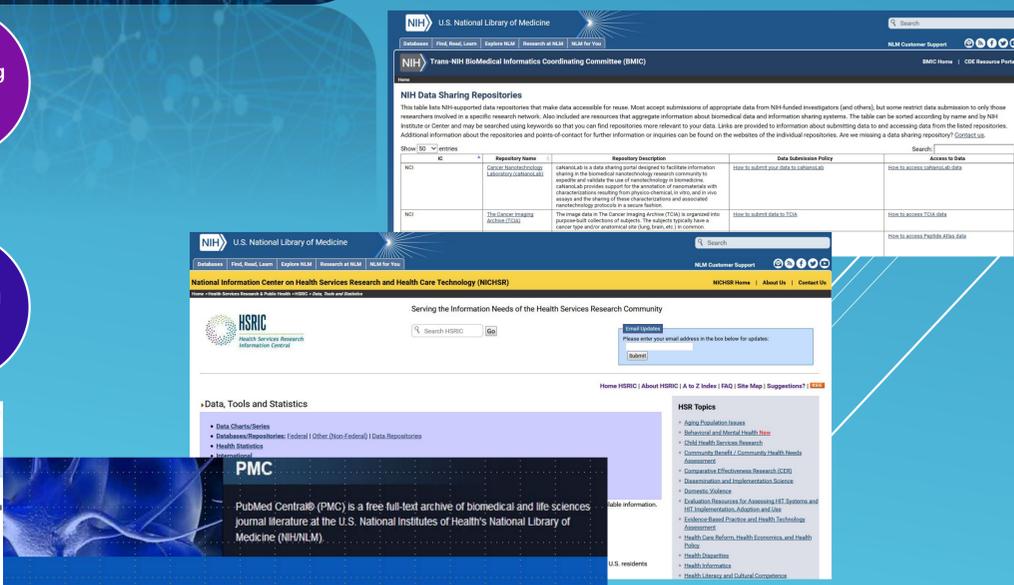

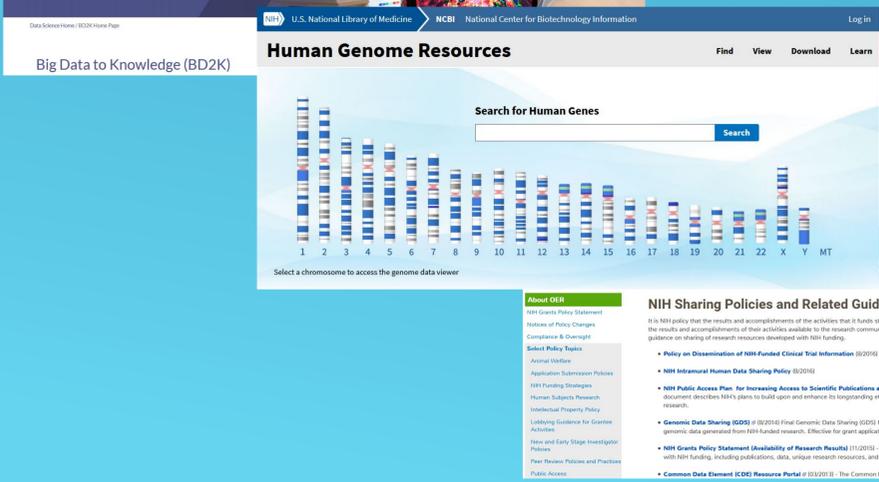

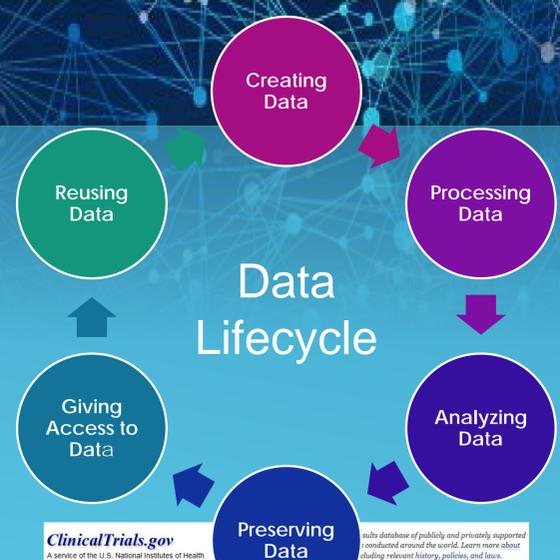

National Network of Libraries of Medicine

National Library of Medicine,
Patricia Brennan, RN, PhD, Director

NIH Big Data to Knowledge: Support professional development in the field of Big Data and Data Science.

NIH Data Sharing Repositories: Facilitate discovery of and access to NIH data through open data repositories.
